

FLOOD LIGHTS & HIGHBAY LIGHTS

LOW ENERGY LIGHTING SOLUTIONS

The benefits of LED flood and factory lighting are many. Some of these are -

- Energy savings of 60% plus when compared to traditional lighting
- Reduced maintenance to replace lamps and control equipment
- Eliminate OHS issues with glass and appropriate disposal of failed lamps
- Fully recyclable product
- No light losses from power spikes or brown outs
- Lights come on to full brightness immediately.
(ideal for movement operated security lights)
- Correct colour for video equipment highest quality image
- Option for battery back up to all lights for a variety of hours.
- Fast payback just with energy savings. Up to 3 years.

At Onedex Power and Water -

We don't just sell lights, we provide solutions. You let us know the outcome you would like to achieve and we will provide a lighting solution using LED technology that will achieve if not greatly exceed your expectations. We will save you 60% plus on your lighting energy bill and in the most part eliminate the costly maintenance costs of replacement of failed lamps.

When it comes to critical asset lighting that MUST be working, you owe it to yourself and to your company to take advantage of LED technology.

When it comes to workshop or warehouse lighting, LED can be switched on and off as many times as you like. When you turn them on, they are full brightness immediately. No loss of time waiting for the lights to come up to full brightness and higher light levels when compared to traditional lighting types.

What does it cost?

We can show you how that with no additional strain on your bottom line, or on your operating expenditure, the energy cost savings alone will pay for the lights and after approx. 3 years (depending on lighting operating hours) that energy cost savings comes right back to you. Adding to your bottom line.

The environment is also the big winner. Just think, if all companies and governments switched to LED. We will reduce our energy by up to 10 or 15% and maybe more. That is a huge load off the environments shoulders. This is a WIN WIN for both YOU and the environment and for a change you don't have to dip into your pocket to save money and the environment.

We are looking forward to hearing from you either on the phone or by email with some information on what lighting you are hoping to replace and outcomes to achieve.
