

SOLAR GARDEN LIGHTS

SOLAR STREET AND AREA LIGHTING SYSTEMS

Onedex Communications have been researching this technology for some 4 years and have visited factories that manufacture this equipment.

The benefits both financially and environmentally are without question. It is simply a question of the right product for the application.

At Onedex Communications, we work with the client to design the product to fit the need. The client will know what they need, we know how to achieve the required outcome.

THERE ARE MANY BENEFITS OF SOLAR LIGHTING SYSTEMS AND SOME OF THESE ARE:

- Minimal in ground infrastructure
- Zero energy running costs
- Zero CO2 emissions
- Reduced maintenance costs
- Longer life
- No black outs (OH&S friendly)
- Environmentally sound investment
- Reduced carbon footprint

In all installations, a major benefit is the elimination of black outs. In the event of power failure, these lights continue to operate providing a safe and secure environment.

As with all other solar lights provided by Solar and LED lighting solutions, the range of garden and park lights we are offering are of a high quality.

All lights including in this range will operate a full 12 hours per night so there is seamless light to the given area.

This range of solar lights offer the opportunity to provide the light required for security and access visibility where required but with some class and individuality.

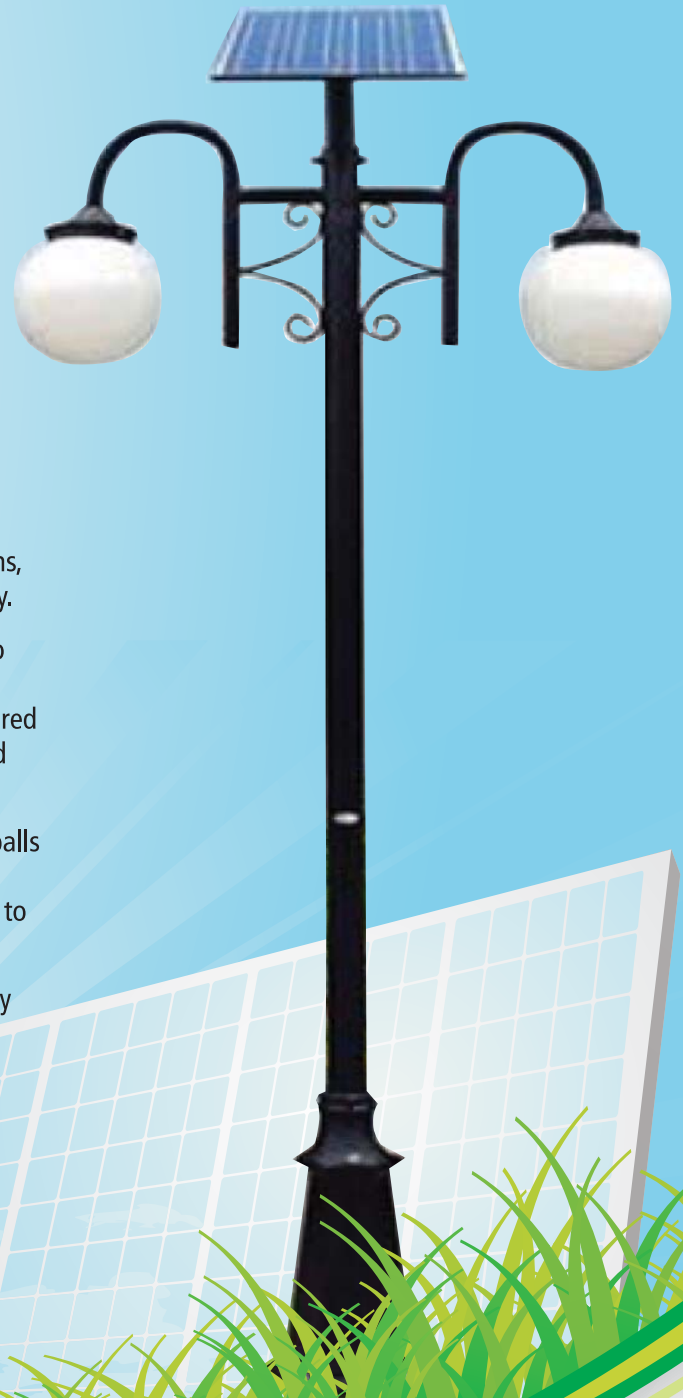

The lights are a heavy duty design and resistant to damage. The white balls used are also resistant to breakage.

All parts for these lights are available in the event of damage occurring to the lights.

As with all our other solar lights, we ensure that the design allows for any deterioration in the storage capacity of the batteries while ensuring the full operational parameters of the light.

There is also the option for you to design your own lights. For projects where continuity and a new theme are required, we will assist with the design of a light that meets your need and your preference in appearance and performance.

We welcome your enquiries and comments.
